Intellectual Property & Copyright

What is Intellectual Property?

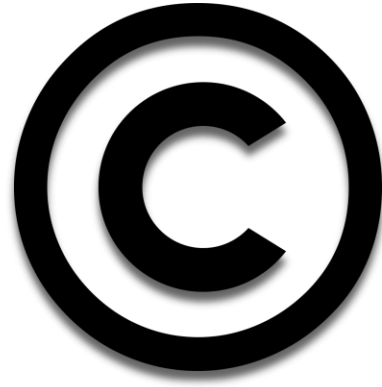

Intellectual property (IP) refers to creations of the mind, such as inventions; literary and artistic works; designs; and symbols, names and images used in commerce.

But this symbol expresses a legal status.

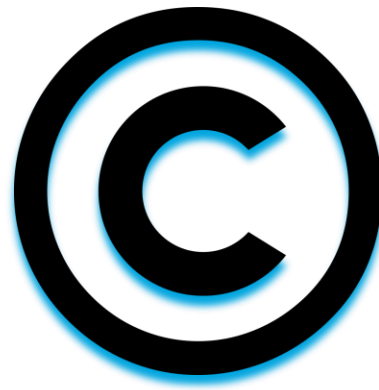

Because we have seen it so often, many of us would have been inclined to use the © symbol.

Beginning about 300 years ago, countries began to offer protection to authors (& inventors, etc.) so they could have the exclusive right to copy their own work: the copyright. This symbol expresses that legal status.

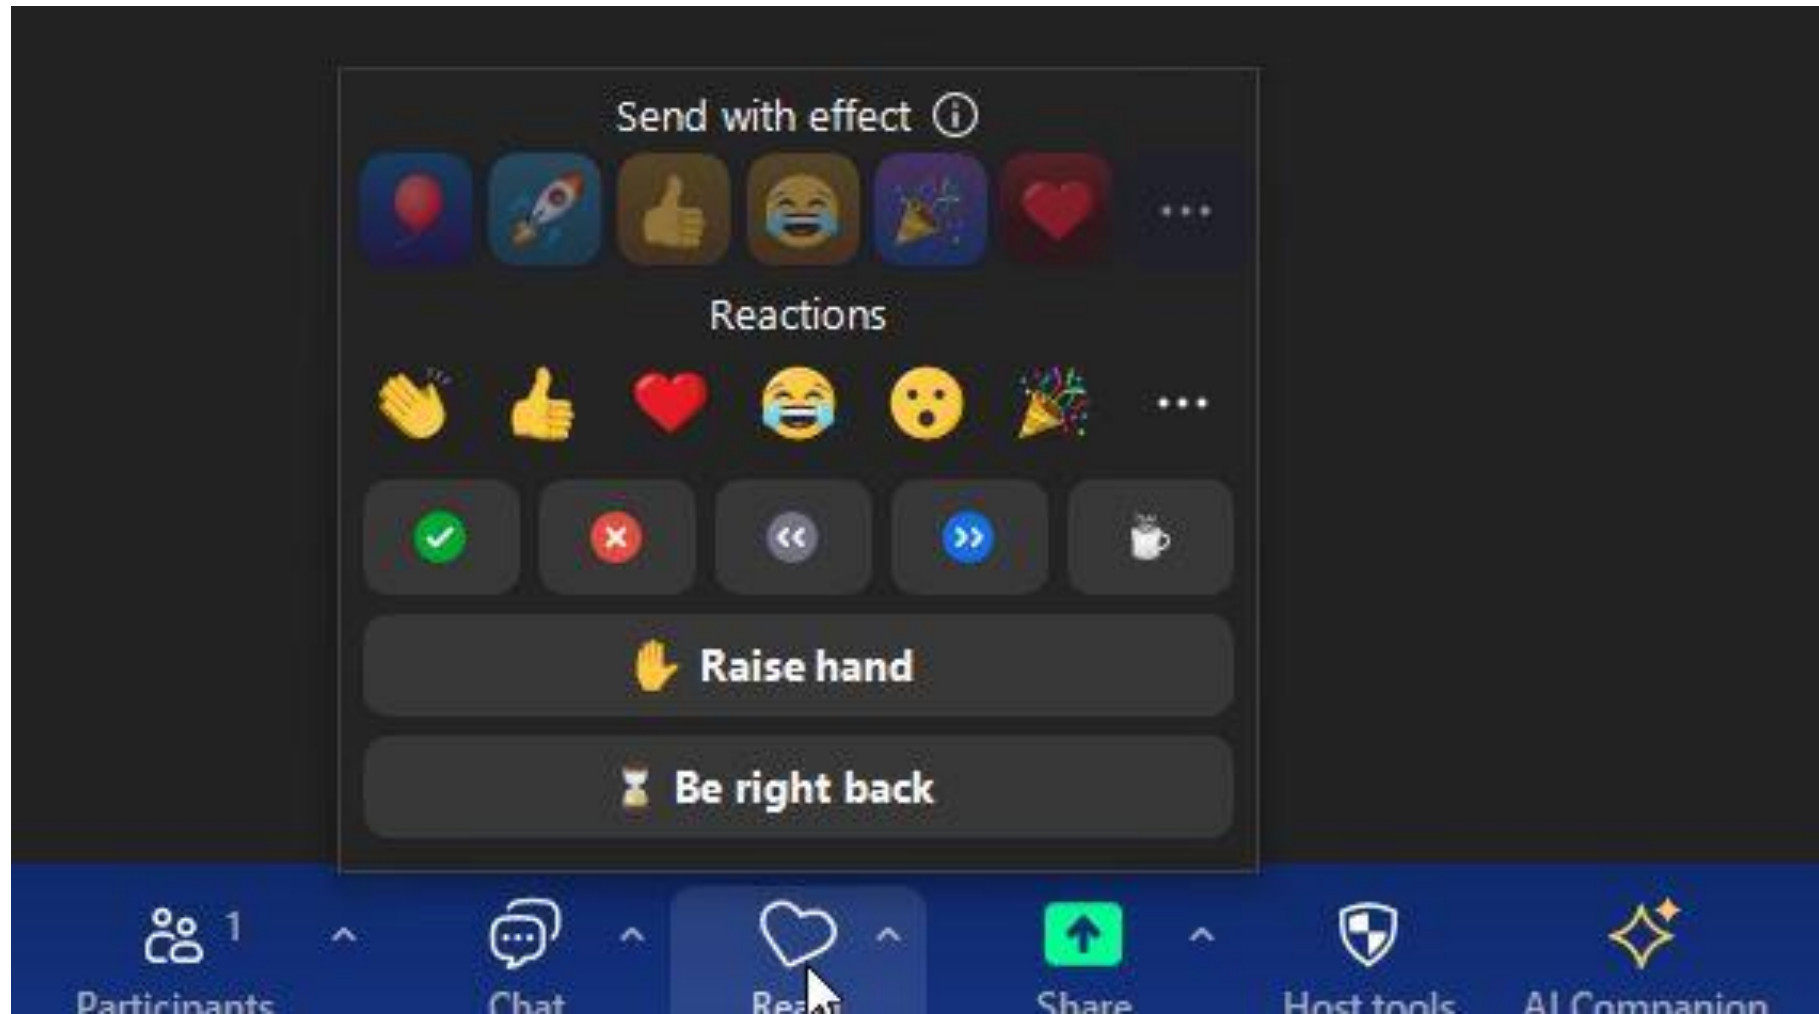

Although laws vary about how long you control your work, they all agree that when you record a new expression, it's yours.

You do not even need to “register” or make a claim.
Copyright is automatic.

- Copyright is the legal right to use or to license a work you have created.
- You can license your work for others to use either tightly or loosely.
- Copyright is automatic, but should be protected by registering, even in countries where this is little respected.

Intellectual Property Quiz

According to what is shown here, under what circumstances are you permitted to copy it? Share it with others? Redistribute it? Publish it?

particular complication, and assign a head to all feet. Finally, you may wonder about situations of stress clash. There are OT constraints that prohibit these, i.e., they are violated when adjacent stress-bearing units are both stressed. In this exercise you can probably ignore this type of constraint since I think its effects can be produced through the interaction of PARSESYLLABLE and FOOTBINARITY.
